Heat exchangers are used for a variety of industrial purposes, such as generating steam, cooling or heating air or a process fluid, e.g., in an air-conditioning system, a refrigeration system or a process-water cooling system. A common type of heat exchanger, often referred to as a plate heat exchanger, comprises a number of spaced-apart, parallel tubes which are mounted in a housing. The tubes are connected to the manifolds to permit a flow of one fluid from one manifold to another, through the tubes.
