For example, the Task Manager tool is a great tool for starting, pausing, resuming, and stopping any Windows application. Task Manager: While you can open the Windows Start menu to start an application, you can also open the Task Manager via Start->All Programs -> Accessories -> System Tools -> Task Manager. Next, you will see the applications that you have currently launched. You can double-click any of those items to start and stop or pause that application. You can also select a process or processes, right-click the selection, and click End Process. This will end that process, but it will not delete any running applications or files. Note: For System Tools, you might need to look in the Start Menu - All Programs - Accessories. On the left hand side, search for System Tools, and it should be the first item listed. Launchy: Launching new applications is what Launchy is all about. The Launchy free utility is designed to help you to add the functionality of a Task Bar to your desktop - launching an application, and adding it to your Start Menu. Start by clicking the "Add New Application" button located in the lower left corner. A list of all the currently installed applications will be presented. You can search for an application, or drag and drop a file name to add it to the list. The drag and drop functionality is very useful for moving or resizing applications.
