What's New in the?

We begin by introducing you to the organiser; we look at some of the features of the application and what you can use it for, to start, create a project and add a new idea, to write and manage a project, set tasks, receive comments and more. Welcome to Evernote 5: When you start Evernote, you'll find yourself on the 'Add an idea' page, where you'll be asked if you want to take notes on something that has been mentioned in any of your channels (informal conversations with friends and family, conversations with your colleagues or even news reports) or you want to create a project to remember all the information. Once you have chosen to create a project, you can move on to the project's title, which can be up to 30 characters long. You can also add an organisation to the project, if you want. We'll be taking a closer look at organisational projects in the next section, but for now, make sure to give your project a descriptive title. So far, we've only talked about ideas, but if you're looking for something else, the next page is the 'Add something to your project' page, which you can use to enter any type of content you want to collect into your project.

The world of eBooks and the eBook revolution By the end of 2009, there were 50 million eBooks in the world; more than 25 percent of them were downloaded within the first 48 hours of publication, and 75 percent of eBooks sold had been downloaded within the first three days. E-readers and eBooks The first e-readers were the Amazon Kindle and Sony's Reader, both released in 2007. The Kindle was sold with special e-books, while Sony made the Reader for downloading content from any site that has an eReader. But e-books were not cheap at the time. The average Kindle book cost approximately \$8.00, but today, the cost is much lower. At the same time as the Kindle and the Reader were released, various companies produced reading applications for smartphones, which are now widely used. Many have since been launched and are on sale. More and more, people are buying eBooks for their tablets. Two years ago, only 23 percent of eBooks were on tablets, but this figure is now around 60 percent. The Number of E-books Published The number of e-books available in bookstores has grown exponentially. There were only 2000 books available in 2008; by the end of 2009, the number had grown to 3.8 million. This figure represents a 54 percent increase in just six years.
